

ECONOMICS 117: ECONOMIC GROWTH

Winter 2015

Tuesday, Thursday 2:00-3:20pm

Pepper Canyon Hall 120

Prof. Mark Machina

Office: 217 Econ Bldg.

Office Hours: Wed 9am-1pm

The subject of this course is the modern theory of economic growth: the tradeoff between current and future consumption, the stability of capitalist economies, the effects of technological progress and monetary policy on economic growth, and the consequences of sustained, or alternatively, of zero economic growth. This course does *not* cover environmental economics – that is the focus of Econ 131: “Economics of the Environment.”

| DATE | TOPIC |
|----------------|--|
| Jan. 6 | The Mathematics of Growth I |
| Jan. 8 | The Mathematics of Growth II |
| Jan. 13 | Consumption vs. Growth with a Fixed Population: Robinson Crusoe’s Problem |
| Jan. 15 | Consumption vs. Growth with a Growing Population: The Blue Lagoon Problem |
| Jan. 20 | Is Capitalism Doomed? The Harrod-Domar Growth Model I |
| Jan. 22 | Is Capitalism Doomed? The Harrod-Domar Growth Model II |
| Jan. 27 | (Tuesday) 1st Midterm Exam |
| Jan. 29 | The Stabilizing Effect of Substitutability: The Neoclassical Growth Model I |
| Feb. 3 | The Stabilizing Effect of Substitutability: The Neoclassical Growth Model II |
| Feb. 5 | Extensions of the Neoclassical Growth Model I |
| Feb. 10 | Extensions of the Neoclassical Growth Model II |
| Feb. 12 | Technological Progress and Economic Growth I |
| Feb. 17 | Technological Progress and Economic Growth II |
| Feb. 19 | (Thursday) 2nd Midterm Exam |
| Feb. 24 | Optimal Growth: The “Golden Rule” |
| Feb. 26 | Money and Economic Growth |
| Mar. 3 | Human Capital and Endogenous Economic Growth |
| Mar. 5 | Measuring the Rates and Determinants of Economic Growth |
| Mar. 10 | Alternative Theories of Growth and Distribution |
| Mar. 12 | Growth in a Finite World: The “Limits to Growth” Debate |
| Mar. 19 | (Thursday) FINAL EXAM 3:00-6:00pm (location TBA) (I will hold Review Sessions prior to each exam.) |

READINGS: A list of readings for the course is attached, and all readings are included in the Soft Reserve Package. Additional handouts will be passed out in class.

LECTURES AND SECTIONS: You are responsible for all the material in the lectures. If you miss one, borrow someone’s notes.

EXAMS: Grades are determined on the basis of two Midterm Exams and a Final Exam.

PRACTICE QUESTIONS: The Soft Reserve Package also contains a set of old Econ 117 exam questions. I will go over some of these questions in office hours and review sessions, but the best way to prepare for the exams is to form groups and practice doing them together.

ECONOMICS 117 COURSE OUTLINE

I. THE MATHEMATICS OF GROWTH

- a. Stocks vs. Flows and the Dimensions of Economic Variables
- b. Absolute, Proportional & Percentage Changes in Variables
- c. Elasticity (Quick Review)
- d. Discrete Time versus Continuous Time
- e. Growth of Discrete Time Variables
 - Constant Proportional Growth and Compounding
- f. Growth of Continuous Time Variables
 - Instantaneous Proportional Growth Rate at a Given Moment
 - Constant Proportional Growth (i.e. Exponential Growth)
- g. Products and Ratios of Growing Variables
- h. Functions of Growing Variables
- i. Notion of a “Steady State”
- j. Examples of Differential Systems

II. CONSUMPTION VERSUS GROWTH WITH A FIXED POPULATION: ROBINSON CRUSOE’S PROBLEM

- a. The Tradeoff Between Current and Long Run Consumption Levels
- b. Maximizing Steady State Consumption

III. CONSUMPTION VERSUS GROWTH WITH A GROWING POPULATION: THE BLUE LAGOON PROBLEM

- a. The Effect of Population Growth on the Robinson Crusoe Problem
- b. Increasing Steady State Per Capita Consumption

IV. IS CAPITALISM DOOMED? THE HARROD-DOMAR MODEL

- a. The Leontief or “Fixed Proportions” Production Function
- b. The “Natural” Rate of Growth
- c. The “Warranted” Rate of Growth
- d. The Instability of the Economy

V. STABILIZING EFFECT OF SUBSTITUTABILITY: THE NEOCLASSICAL MODEL

- a. Constant Returns to Scale (CRS) Production Functions
 - Definition of Constant Returns to Scale (and Scale Invariance)
 - Examples: Linear, Leontief, Cobb-Douglas, CES
 - Some Strange & Wonderful Properties of CRS Production Functions
 - Marginal and Average Products are All Scale Invariant
 - Euler’s Theorem
 - Input Elasticities Sum to Unity
- b. Factor Substitutability and “Smooth” Production Functions
- c. The Automatic Stabilizing Effect of Factor Substitution
- d. Comparative Statics of the Steady State
- e. Factor Prices and the Distribution of Income

VI. EXTENSIONS OF THE NEOCLASSICAL GROWTH MODEL

- a. Variable Population Growth Rates**
- b. Variable Labor Supply**
- c. Variable Savings Rate**
- d. Taxation and Government Spending**

VII. TECHNOLOGICAL PROGRESS AND ECONOMIC GROWTH

- a. The Sources of Technical Progress**
- b. The Three Implications of Technical Progress**
- c. Hicks Neutral, Harrod Neutral and Solow Neutral Technical Progress**
- d. Continuous Technical Progress**
- e. Technical Progress and Economic Growth**
- f. Embodied Technical Progress**

VIII. OPTIMAL GROWTH: THE “GOLDEN RULE”

- a. Diagrammatic Representation of the Golden Rule**
- b. Intuitive Explanation of the Golden Rule**

IX. MONEY AND ECONOMIC GROWTH

- a. Money as an Asset**
- b. The Neoclassical Growth Model with Money**
- c. The Effects of Monetary Policy on Economic Growth**

X. HUMAN CAPITAL AND ENDOGENOUS ECONOMIC GROWTH

XI. MEASURING THE RATES AND DETERMINANTS OF ECONOMIC GROWTH

- a. Estimating “Aggregate Production Functions”**
- b. Estimating Technological Progress and the Effects of Education**
- c. Data Sets and Growth Accounting**
- d. Empirical Analysis of Regional and Cross-Sectional Data Sets**

XII. ALTERNATIVE THEORIES OF GROWTH & THE DISTRIBUTION OF INCOME

- a. The Ricardian and Marxian Theories**
- b. The Keynesian or “Cambridge” Theory**

XIII. GROWTH IN A FINITE WORLD: THE “LIMITS TO GROWTH” DEBATE

- a. The Possibility of Sustained Economic Growth**
- b. The Desirability of Sustained Economic Growth**
- c. The Consequences of Zero Economic Growth**
- d. Global Modeling: The Club of Rome Model**
